• Option for Wi-Fi or built-in 3G

Management console package
• Web-based management console
• 24/7 support from Google
• Limited warranty
• Additional $30* per device

Chromebooks are fast, portable computers that give students and faculty access to the educational apps and resources of the web.

Chromebooks have a web-based management console that makes it easy for you to deploy and centrally manage a fleet of Chrome devices and users.

With just a few clicks, the management console allows you to:

Create user groups
Apply policies, apps, and settings to different sets of users. Group students by grade level or subject. Separate students and faculty.

Pre-install and block apps
Blacklist (block), whitelist, or pre-install apps, extensions and websites.

Track assets
Assign devices to specific students and faculty and get configuration and usage reports.

Manage user access
Control who uses your Chrome devices: prevent outside users from logging in, disable Guest Mode, or designate specific types of users (like teachers) who can sign in to a device.

Control network access
Define network and proxy settings to make it easy for students to get up and running and ensure they’re protected by web filters and firewalls.

Customize user features
Modify student settings like bookmark and app sync across computers, and show some school spirit on your devices with custom Chrome desktop themes.

—Matthew Peskay, director of IT, KIPP LA
